Gross Profit	■774,711
Customers	613
AOV	■351
Repeat Rate	92.8%
Avg CLV	■3,162

Executive Insights

- Revenue generated across 2024-01-01 to 2025-12-30 with an average order value of ■351.
- 92.8% of customers placed more than one order, creating a clear retention opportunity.
- The customer portfolio contains 103 At Risk customers and 144 Champions.
- Inventory planning flags products for reorder based on lead-time demand, volatility and current stock coverage.
- The recommended operating model is to use CLV/RFM for marketing prioritization and forecast/reorder signals for supply planning.

Customer Value & Retention

Segment	Customers	Avg CLV	Revenue
Lost Customers	142	■5,794	■781,380
Potential Loyalists	40	■4,602	■170,791
Needs Attention	123	■3,700	■422,568
Loyal Customers	61	■2,564	■147,025
At Risk	103	■1,863	■183,604
Champions	144	■891	■118,296

Retention is analyzed by first-purchase cohort and month-since-acquisition. In Power BI, the cohort matrix should be displayed as a percentage heatmap with channel and region slicers.

Inventory & Forecast Planning

Status	Products
HEALTHY	23
REORDER	13
WATCH	9

Operational logic: Reorder Point = Lead-Time Demand + Safety Stock. Products below the reorder point are flagged REORDER; low stock coverage is flagged WATCH. The Excel planner is the operational handoff for inventory teams.
